

Understand the commitments behind capacity.

Inspect assignments, schedules and bookings while keeping the original work close.

A resource decision can go wrong when a small task count is mistaken for free time or a project filter hides other commitments.

What changes for your team

- Open the work behind an assignment-load signal.
- Review authorized schedule and booking evidence.
- Return to the task or project after inspecting capacity.

Explore the workflow

- Bandwidth assignment drilldowns and people search
- Recorded capacity for the next four weeks
- Movable minimized-record bar with Go back

Availability depends on your release, permissions, enabled modules and connection setup. Verify the exact workflow before commitment.
