

Keep the evidence with the work.

Connect tasks, projects, approvals and service outcomes in Vision.

When work crosses teams, the reason for a decision and proof of delivery can get separated from the original request.

What changes for your team

- Follow a request through its connected records.
- Keep owners and decisions visible as work changes.
- Review the outcome using the evidence that supports it.

Explore the workflow

- Independent tasks and project organization
- Connected work across documents, reviews and delivery
- Service fulfillment and requester feedback in enabled ITSM modules

Explore Vision at <https://nanox.tv> and arrange a demonstration around one real workflow.

Explore Nano X at nanox.tv or ask your representative for a scoped walkthrough.

Availability depends on your release, permissions, enabled modules and connection setup. Verify the exact workflow before commitment.
