Hand off a clear task to a coding agent.

Review the context in Vision and follow the real GitHub task, branch and draft PR.

AI-assisted implementation still needs a clear request, a known repository and accountable review. A free-form prompt alone does not establish delivery.

What changes for your team

- Review the destination and task context before delegation.
- Keep the provider task and code artifacts linked to work.
- Retain GitHub's review and merge controls.

Explore the workflow

- Explicit GitHub cloud-agent task creation
- Bounded task-specific handoff context
- Agent, branch, draft PR, check and review visibility

Explore Vision at https://nanox.tv and arrange a demonstration around one real workflow.

Explore Nano X at nanox.tv or ask your representative for a scoped walkthrough.

Availability depends on your release, permissions, enabled modules and connection setup. Verify the exact workflow before commitment.
