

Carry incidents through recovery and prevention.

Connect service context, engineering work and the observation that confirms restoration.

Closing an incident without retaining the fix and its evidence can leave the same failure waiting to recur.

What changes for your team

- Keep response, permanent fix and governed change connected.
- Inspect service and configuration context.
- Turn repeat signals into assigned investigation work.

Explore the workflow

- Incident, problem, change and CI relationships
- Service recovery linked to release readiness
- Permission-filtered recurring-incident signals

Explore Vision at <https://nanox.tv> and arrange a demonstration around one real workflow.

Explore Nano X at nanox.tv or ask your representative for a scoped walkthrough.

Availability depends on your release, permissions, enabled modules and connection setup. Verify the exact workflow before commitment.
