

Review unused licenses with evidence.

Coordinate an independent decision and keep the application owner accountable for the result.

A usage gap is not enough to reclaim a license safely. Teams need a recent observation, a responsible application owner and a record of the action taken.

What changes for your team

- Distinguish unknown use from documented inactivity.
- Keep approval tied to fresh evidence.
- Retain the owner's vendor action receipt.

Explore the workflow

- Recorded allocations and usage observation dates
- Independent reclamation review
- Owner-confirmed outcomes with cost and currency context

Explore Vision at <https://nanox.tv> and arrange a demonstration around one real workflow.

Explore Nano X at nanox.tv or ask your representative for a scoped walkthrough.

Availability depends on your release, permissions, enabled modules and connection setup. Verify the exact workflow before commitment.
