

Make service requests clear from the start.

Publish request forms, decision owners and fulfillment evidence in one service workflow.

A catalog is useful when it explains what happens after someone clicks Request. Employees and operators need a shared view of the request, approval and result.

What changes for your team

- Help eligible members find the right service.
- Keep the reviewed request and policy together.
- Make fulfillment ownership and evidence visible.

Explore the workflow

- Searchable catalog with required request fields
- Private revision-pinned service requests
- Manual evidence receipts and supported Entra access fulfillment

Explore Vision at <https://nanox.tv> and arrange a demonstration around one real workflow.

Explore Nano X at nanox.tv or ask your representative for a scoped walkthrough.

Availability depends on your release, permissions, enabled modules and connection setup. Verify the exact workflow before commitment.
