

See the work between the steps.

Use Workflow Studio to explain responsibilities, journeys and decision paths.

A process can look complete while its handoffs remain unclear. People need to see what moves between steps and who receives it.

What changes for your team

- Discuss responsibilities and transitions on the same workflow.
- Inspect full handoff context.
- Save a readable layout without changing execution.

Explore the workflow

- Build and System Map views
- Architecture, Journey and Decision flow presentations
- Separate saved map spacing and keyboard movement

Explore Vision at <https://nanox.tv> and arrange a demonstration around one real workflow.

Explore Nano X at nanox.tv or ask your representative for a scoped walkthrough.

Availability depends on your release, permissions, enabled modules and connection setup. Verify the exact workflow before commitment.
