

Tasks can stand on their own.

Give work structure when it needs structure, without starting over.

Not every task begins as a project. Forcing early hierarchy can slow capture; leaving work scattered can hide ownership and blockers.

What changes for your team

- Capture independent work and keep it visible.
- Move work into the right project or subproject when plans mature.
- Retain the identity and history behind the work.

Explore the workflow

- No project, Unassigned, Waiting on someone and Overdue Focus filters
- Reviewed organization of tasks and optional subtasks
- Explicit ownership handoff with current access checks

Explore Vision at <https://nanox.tv> and arrange a demonstration around one real workflow.

Explore Nano X at nanox.tv or ask your representative for a scoped walkthrough.

Availability depends on your release, permissions, enabled modules and connection setup. Verify the exact workflow before commitment.
