

Treat temporary access as a full lifecycle.

Connect independent approval, verified membership and accountable cleanup.

An approved access request is incomplete if nobody can explain when access ends or what happens when removal fails.

What changes for your team

- Keep access intent, duration and reviewer history together.
- See observed grant and removal results.
- Make exceptions actionable for the assigned operators.

Explore the workflow

- Explicit Entra identity mappings and approved security groups
- Optional bounded extensions and periodic access reviews
- Durable removal tracking and recovery actions

Explore Vision at <https://nanox.tv> and arrange a demonstration around one real workflow.

Explore Nano X at nanox.tv or ask your representative for a scoped walkthrough.

Availability depends on your release, permissions, enabled modules and connection setup. Verify the exact workflow before commitment.
